

GLOBAL FINANCIAL COMMODITY BULL/BEAR POSITIONING DEVICE

ABSTRACT OF THE DISCLOSURE

A global financial commodity bull/bear positioning device includes a processing unit, an input unit, a display unit and a program unit, wherein the processing unit is in connection with the input unit and the display unit and the program unit is installed in the processing unit for display market disk on the display unit under the control of the processing unit. The market disk is composed of a disk base and rotating pieces. The disk base is comprised of a raising-up section and a lowering-down section both having circumference on which indexes are marked. Each rotating piece is movably arranged on a top face of the disk base and has a positioning section corresponding to the raising-up and lowering-down sections of the disk base to provide indication of bull/bear markets of different periods of time. The input unit functions to enter values of the indexes of different time periods. Thus the bull/bear market information of different time periods can be combined together and the rotating pieces are mounted on the disk base to allow for correctly handling of timing of selling/buying of financial commodities.
